

How to obtain credit for the course LVA Quantenoptik 2 (141.A11), TU Wien, SS 2016

Type of credit that can be obtained:

Participants of LVA 141.A11 will be able to obtain graded credit (benoteter Schein). There are two ways how credit can be obtained, see below. In this context it is worth pointing out that students can decide to take way No. 1 at any time during the course (e.g. in the case that not enough points have been obtained from handing in solutions to the exercise sheets).

Way No. 1 (oral exam)

There will be an oral exam offered at the end of the course. The exam will cover a sub-set of the material covered in the lecture. In the case of way No. 1, the grade for the course LVA 141.A11 will be entirely based on the performance in the oral exam.

Way No. 2 (exercise sheets and simplified exam)

Students can obtain points by handing in solutions to the questions from our exercise sheets. The solutions have to be provided on time. No points will be rewarded when handing in after the deadline that is indicated on the sheet. In the case that at least 50 % of the points from the exercise sheets have been obtained, the student has qualified choosing to take the simplified exam. In the latter a known problem from the exercises has to be solved. The problem is chosen by the examiner. For way No. 2, the final grade for the course LVA 141.A11 is based to 60 % on the points obtained in the exercise sheets and to 40 % on the performance in the simplified exam. In the case that simplified exam is graded with a 5 (worst grade, "ungenügend"), then the whole course will be graded in this way.
